 May 2009
 30 April 2009

IN THIS ISSUE

Where available, the statistics in this issue are presented as time series for the last three years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the Australian Bureau of Statistics for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300 135 070 or <cli>client.services@abs.gov.au>.

CHANGES IN THIS ISSUE

There are changes to monthly retail trade statistics which are published in tables 3.2, 3.3 and 9.4. Further information on these changes can be found in a feature article in the July 2008 issue of *Retail Trade Trends*, *Australia*, *July 2008*, (cat. no. 8501.0).

The May 2008 issue of *Job Vacancies*, *Australia*, (cat. no. 6354.0) released on 26/6/08 was the final issue for 2008. The Survey of Job Vacancies will not be conducted during 2008-09. The survey may be reinstated in 2009-10. This will effect Tables 6.8 and 9.12.

EXTENDED TIME SERIES

Long time series datacubes for this publication are now provided on the ABS website.

SYMBOLS AND OTHER USAGES

See the Abbreviations section following the Explanatory Notes.

CHAPTER 1 NATIONAL ACCOUNTS CONTENTS page TABLES 1.2 1.3 Gross value added by industry at basic prices, chain volume measures 10 1.4 1.5 1.6 1.7 1.8

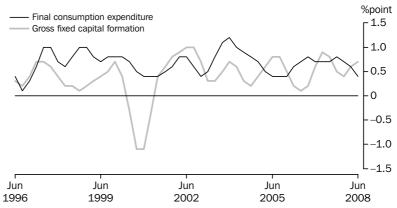

GRAPHS

GDP AND REAL NET NATIONAL DISPOSABLE INCOME, (from Table 1.1) Chain volume measures, Trend—Quarterly % change

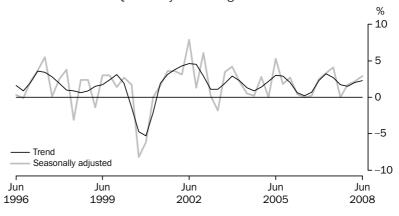

Source: Australian National Income, Expenditure and Product, (cat. no. 5206.0)

CONTRIBUTIONS TO GROWTH IN GDP, (from Table 1.2) Chain volume measure, Trend

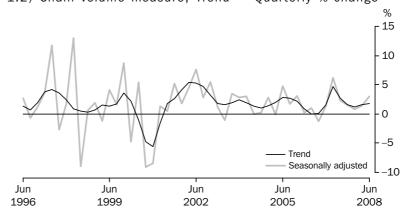

Source: Australian National Accounts: National Income, Expenditure and Product, (cat. no. 5206.0)

TOTAL GROSS FIXED CAPITAL FORMATION, (from Table 1.2) Chain volume measure—Quarterly % change

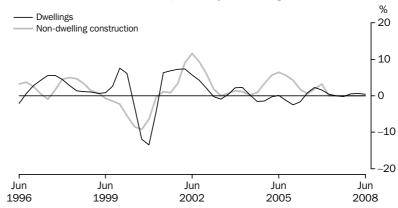

PRIVATE GROSS FIXED CAPITAL FORMATION (PGFCF), (from Table 1.2) Chain volume measure, Trend — Quarterly % change

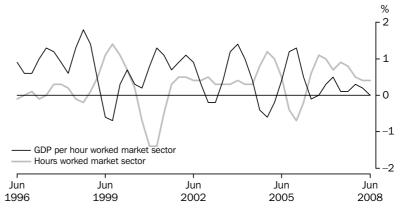

Source: Australian National Accounts: National Income, Expenditure and Product, (cat. no. 5206.0)

PRIVATE GFCF: SELECTED COMPONENTS, (from Table 1.2) Chain volume measure, Trend—Quarterly % change

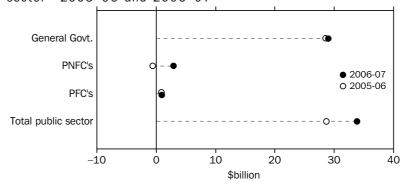

Source: Australian National Accounts: National Income, Expenditure and Product (cat. no. 5206.0)

LABOUR PRODUCTIVITY (PROXY) TREND, (from Table 1.6) GDP Market sector, Chain volume measure—Quarterly % change

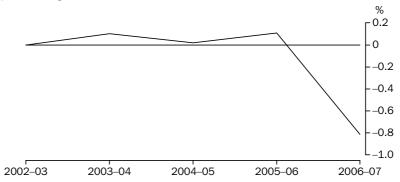

GFS NET OPERATING BALANCE, (from Table 1.7) Total public sector—2005-06 and 2006-07

Notes: PNFC = Public Non–Financial Corporations. PFC = Public Financial Corporations.

Source: Government Finance Statistics, Australia, (cat. no. 5512.0)

TOTAL PUBLIC SECTOR, (from Table 1.7) Net lending/borrowing as a percentage of $\ensuremath{\mathsf{GDP}}$

Notes: A negative percentage of GDP represents a net borrowing position.

A positive percentage of GDP represents a net lending position.

Source: Government Finance Statistics, (cat. no. 5512.0)

Accruals-based Government Finance Statistics, (GFS) are presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the main analytical measures are described in the AEI Glossary.

⁽a) Basic prices are the amounts received by producers, including the value of any subsidies on products, but before any taxes on products.

⁽b) Reference year for chain volume measures is 2005–06.

⁽c) GDP at purchaser's prices.

⁽a) Sales is defined as gross non-farm product plus imports of goods (d) By convention, zero productivity growth is assumed for industries in and services less changes in private non-farm inventories.

⁽b) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. TFI = Total factor income.

⁽c) Interest paid component contains original data.

the non-market sector, mainly government and some service industries. Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

⁽a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in tables 2.4 to 2.7 obtained from International Trade in Good and Services, Australia, (cat. no. 5368.0) issued monthly, due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0).

Source: Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0)

⁽b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with corresponding monthly seasonally adjusted estimates, shown in table 2.4 due to the independent seasonal adjustment of the Quarterly and Monthly data.

na not available

⁽a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural.

⁽b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in tables 2.1 obtained from Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0).

⁽c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in table 2.1 obtained from Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

⁽a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and Gross Domestic Product for the year ended with that period. Other ratios use only data for the year ended with the period shown.

⁽b) For the latest reference period, GDP for the year ended with the previous quarter is used.

⁽a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.

Source: Australian National Accounts: National Income, Expenditure and Product, (cat. no. 5206.0)

⁽b) Base for index: 2005-06 = 100.0.

⁽c) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.

⁽d) Deflated by the Gross National Expenditure deflator.

⁽e) Ratio of derived private non–farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.

⁽f) Nominal unit labour costs (see footnote (g) deflated by the derived implicity price deflator for gross non-farm

⁽g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

⁽a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.

⁽b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.

⁽c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations.

⁽d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.

⁽e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector.

⁽f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.

⁽g) Bills outstanding under acceptance and endorsement commitments by banks.

⁽h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money. Source: Reserve Bank of Australia Bulletin (RBA).

⁽a) Rates are period average exchange rates.

Source: International Trade in Goods and Services, Australia, (cat. no. 5368.0)

⁽b) On January 1, 1999 eleven European Union nations launched the Euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The Euro was immediately available for electronic financial and business transactions, but Euro coins and notes were not issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the Euro.

⁽a) Original sales data are provided by the Federal Chamber of Automotive Industries and sourced from VFACTS.

⁽b) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicles sales in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of this data makes reliable estimation of the seasonal pattern very difficult. Source: Sales of New Motor Vehicles, (Electronic Publication), (cat. no. 9314.0.55.001)

10.13	M1 plus quasi-money index

NOTES

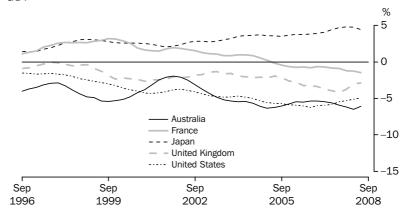

CONSUMER PRICE INDEX (CPI).

Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to "provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index." Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series "All groups excluding housing and financial and insurance services." The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. 1989-90 = 100.0) and as such are not directly comparable with those for All items published in table 10.7 (presented on a reference base of 2000 = 100.0).

EXPLANATORY NOTES

INTRODUCTION

- 1 Explanatory Notes in the form found in other ABS publications are not included in Australian Economic Indicators. Readers are directed to the Explanatory Notes contained in related ABS publications.
- **2** Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. It also includes commentaries, articles and technical notes. Australian Economic *Indicators* has been developed primarily as a reference document, providing a broad basis for economic analysis and research.
- **3** The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

MOST RECENT DATA

RELATED PUBLICATIONS

- **4** The statistics shown are the latest available as at 26 November 2008.
- **5** A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.
- 6 Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to Australian Economic Indicators include:
 - Australian and New Zealand Standard Industrial Classification (ANZSIC), cat. no. 1292.0
 - Australian System of Government Finance Statistics: Concepts, Sources and Methods 2005, cat. no. 5514.0
 - Australian National Accounts: Concepts, Sources and Methods, cat. no. 5216.0

SEASONALLY ADJUSTED AND TREND ESTIMATES

- **7** Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.
- 8 It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:
 - longer-term changes in the item being measured (i.e. trend movements)
 - short-term irregular changes
 - regular seasonal influences
 - normal 'trading', 'working' or 'pay' day patterns
 - systematic holiday effects.

SEASONALLY ADJUSTED AND TREND ESTIMATES continued

- **9** Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.
- **10** Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.
- **11** The general methods used in the ABS for making seasonal adjustments are described in Information paper: *An Introductory Course on Time Series Analysis Electronic Delivery* (cat. no. 1346.0.55.001). The method used to estimate trends is described in Information Paper: *A Guide to Interpreting Time Series Monitoring Trends* (cat. no. 1349.0).
- 12 The ABS uses concurrent seasonal adjustment to derive the combined adjustment factors. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated. Further information on concurrent seasonal adjustment can be found in Information Paper: *Introduction of Concurrent Seasonal Adjustment into the Retail Trade Series*, 1999 (cat. no. 8514.0).

CHAIN VOLUME MEASURES

- chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.
- **14** Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 2005-06) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. A new base year and the reference year for volume measures was previously updated annually in the June quarter Australian National Accounts (Australian Economic Indicators, October issue). From 2007 onwards the reference year updates in the September quarter Australian National Accounts (Australian Economic Indicators, January issue) each year. In the September quarter 2007 Australian National Accounts issue, the new reference year became 2005-06 for volume estimates. This had two effects, first, a new base year, 2005-06, was introduced which has resulted in revisions to growth rates in subsequent periods. Second, the volume estimates have been re-referenced to 2005-06 thus preserving additivity in the quarters after the reference year. Re-referencing changes levels but not growth rates, although some revision to recent growth rates can be expected because of

CHAIN VOLUME MEASURES continued

OTHER USAGES

the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

- 15 Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left – in keeping with the international standard for these statistics. Some tables include subtotal columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.
- **16** Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.
- **17** Yearly periods shown as, e.g. 2005–06, refer to the fiscal year ended 30 June 2006.
- **18** Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.
